HiGHmed Symposium

We are collaborating in Global Standards

Working with Governments

We are actively engaged with governments across the globe

In countries such as the UK and Australia we are part of formal government governance

We have input and supported governments in their strategy for data including Ireland and the Netherlands

openEHR

openEHR is transforming health and care globally by enabling seamless, interoperable, and patient-centerd digital health systems. As we look to the future, openEHR is cementing its position as the global standard for semantically harmonized healthcare data. Our vibrant community fosters collaboration across nations, organizations, and disciplines, driving progress in healthcare innovation.

By supporting patient-centerd records and advancing breakthroughs such as AI and personalized care, while strengthening collaboration with global health standards leaders like HL7 and SNOMED, openEHR is creating a robust ecosystem that empowers clinicians, researchers, and patients alike. Together, we can envision a future where openEHR not only enhances health outcomes but also bridges the digital divide, ensuring that everyone, regardless of location, has access to high-quality, data-driven care.
